

MEETING – WEEK 2

Date: 02-09-2026

Meeting Number: 02

PARTICIPANTS

- Neil Saldanha
- Shahala Shahzeen
- Thrupthi Anchan
- Aman Assadi

AGENDA

1. Review the Week 1 progress.
2. Discuss the Week 2 simulator requirements.
3. Plan the STC89C52 CPU and instruction execution implementation.
4. Develop the FETCH → DECODE → EXECUTE flow.
5. Design and implement the basic simulator UI.
6. Implement and test the selected instructions.
7. Test the complete demonstration program.
8. Plan Week 2 documentation and GitHub submission.

DISCUSSION

- The Week 1 work and initial project setup were reviewed.
- The Week 2 requirements for developing a working STC89C52 simulator prototype were discussed.
- The CPU state, registers, Program Counter (PC), Stack Pointer (SP), flags, and program memory were considered for the simulator.
- The instruction execution process using FETCH → DECODE → EXECUTE was discussed and implemented.
- The selected instructions were implemented and tested individually.
- The basic JAVA UI was developed to display the program, current instruction, PC, registers, flags, status, trace, and changes.
- Step and Run execution were tested using sample programs.
- A complete demonstration program containing the selected instructions was tested successfully.
- The Week 2 documentation and GitHub submission requirements were reviewed.

DECISIONS

9. The simulator will use a logical FETCH → DECODE → EXECUTE execution cycle.
10. The selected STC89C52 instructions will be implemented and tested.
11. A complete demonstration program will be used to verify the integrated execution.
12. The JAVA UI will be used as the basic simulator interface.
13. The completed Week 2 work will be committed and merged into the main GitHub branch.

ACTION ITEMS

Team Member	Responsibility
Neil Saldanha	CPU part
Shahala Shahzeen	Memory part
Thruipti Anchan	Testing
Aman Asadi	UI

NEXT MEETING

Agenda: Review Week 2 progress, identify any remaining issues, and plan Week 3 development tasks.

Next Meeting Date:04-09-2026
